---

The EPA reviewed the current plan and with the addition of the downstream boom near the county bridge feel that it contains appropriate controls. We are awaiting review by Utah Water Quality Division, and I expect to get their ok tomorrow morning. I expect to be able to give the go ahead once I hear back from the Water quality division, with the understanding that if oil starts getting past the final boom, they reevaluate the containment measures. Obviously these control need to be in place, in the stream before work commences.

Please address the additional comments we received from UTDEQ below. The prevention and monitoring plan should be sent to EPA and the state in hard copy once the changes are made.

Thanks

Subject: Re: Fw: Oil Sheen Prevention Plan version 2

Kathy-

I looked at the plan and have the following comments:

- 1) A need for a sampling plan or a reference to a sampling plan explaining how the confirmation samples will be collected from segment 4.
- 2) A map showing where the samples will be collected.
- 3) Explain what will be done if segment 4 is impacted.
- 4) Location of turbidity measurement stations.
- 5) It should also be put in the plan that the county be notified when a sheen enters segment 4.

Water Quality was given the plan this morning and should have some comments today.

I will talk to you later. We will follow up with a letter with the comments at a later date.

Later,

Jason
